

Process intensification

iCELLis™ for Cell Therapy

Fully closed and controlled system

Specific process development challenges on the autologous cell therapy market:

- Safety and quality within a strongly regulated environment
- Reliability to guarantee product sustained purity and potency
- Cost savings to make the therapy available to patients

Artelis' solution to your cells process challenges

iCELLis™ - a **fully closed and controlled** system:

minimizes the number of aseptic operations and ensures process reliability and patient's safety

iCELLis™ - an **individual, compact and disposable** high-cell-density bioreactor:

enables dramatical decrease in footprint, which reduces investment and operational costs

iCELLis™ - an **innovative** and **proven efficient** technology for cell culture bioprocesses

Rely on us to adapt **iCELLis™** technology to your specific process

We watch your cells
